

BELT SCRAPERS

With ROSTA SE Tensioners

Belt scrapers utilising ROSTA SE tensioners are

- low cost
- low maintenance
- simple to install
- use superior technology and
- provide controlled tensioning

THE SMART CHOICE

Belt scrapers using ROSTA SE tensioners can cost a quarter of the price of some scrapers, and can easily be fabricated in your own workshop. The ROSTA units provide positive tension on the belt over the life of the scraper blade, require little or no adjustment once installed, and provide highly effective cleaning.

What's more, the belt scrapers don't need expensive, high-tech scraper blades that constantly require replacement. The self-adjusting ROSTA units allow most applications to work well with just a strip of black rubber.

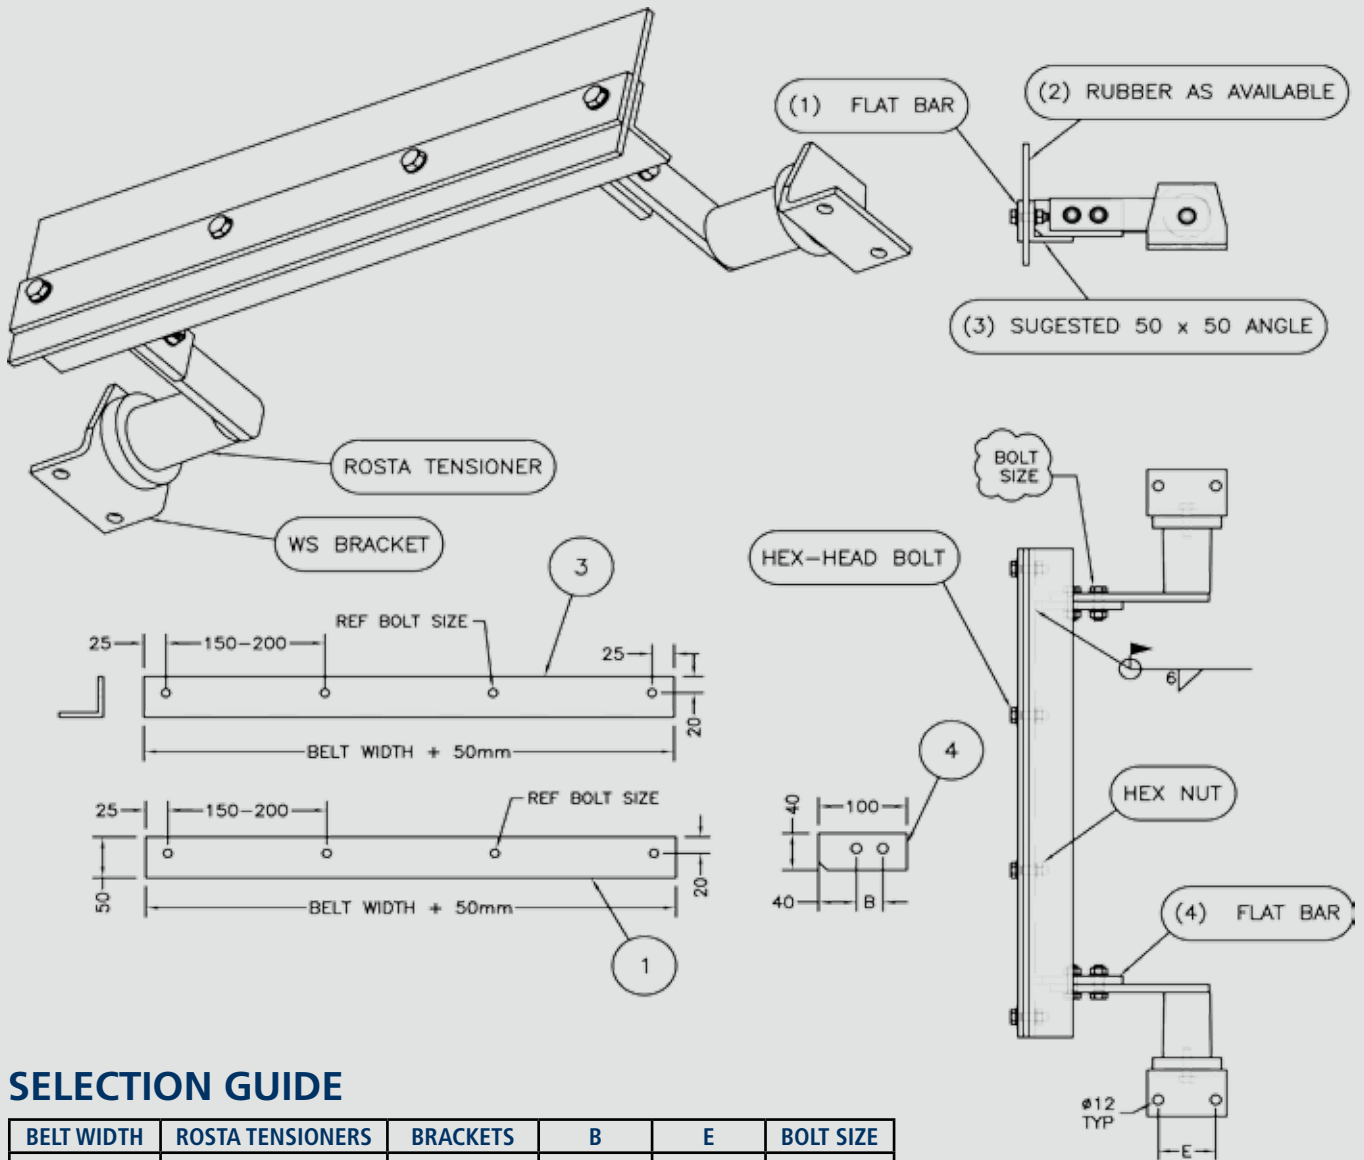

ROSTA SE tensioners are regularly utilised in belt scraper systems for the mining, quarrying, agricultural, timber and food processing industries and they are also available in AISA 304 food industry grade stainless steel.

BELT SCRAPERS
